

Uploading Photos

Everything you shoot gets added through the **Sanity Studio** — your private control panel. Open it in any browser at waterdogproductions.com/studio and sign in. The fastest way to add a session is the **Bulk Upload** tool.

Here's the whole flow.

● BULK UPLOAD — STEP BY STEP

1

Open the Bulk Upload tool

In the Studio's left sidebar, click **Bulk Upload** (the ↑ **upload icon**). This is the screen built for adding many photos at once.

2

Add your images

Drag & drop photos straight onto the dashed box, or click **Browse Files** and select them. You can pick as many as you want — hold ⌘ **Cmd** (Mac) to select multiple at once. Only image files are accepted.

3

Check the list

The box turns green and shows how many images are selected. Wrong one snuck in? Click the ✕ next to it to remove, or **Clear All** to start over.

4

Set the Photo Settings

These apply to **every photo in this batch**, so upload one date & location at a time:

Date Taken	The day you shot the session (defaults to today).
Location	Pick one: HB Pier · Newport · San Clemente · Laguna.
Featured on Homepage	Tick this only for your best shots — featured photos show on the front page.

5

Hit Upload & wait for the green check

Click **Upload X Photos**. A progress bar shows “Uploading 3 of 12...”. **Don't close the tab** until you see the green “**Successfully uploaded**” message. Done!

One date + one location per batch. Because the settings apply to the whole upload, do each shoot separately. Shot HB Pier in the morning and Newport in the afternoon? That's two uploads.

● GOOD TO KNOW

● Your originals are safe

Full-resolution files are stored privately. The public gallery only ever shows a **watermarked** version — customers get the clean original only after they pay.

● They appear fast

New photos show up in the live gallery within about a **minute** of a successful upload. Refresh the gallery page to see them.

● Featured = front page

The **Featured on Homepage** checkbox is what puts a photo on the homepage. Keep it to your strongest few so the front page stays sharp.

● Phone or computer

The Studio works in any browser. A computer is easiest for big batches, but you can upload from your phone in a pinch.

● FIXING OR REMOVING A PHOTO

1

Open the Photo list

In the sidebar, click **Photo** to see every photo, newest grouped by location and date.

2

Click the one you want to change

Edit its **Date**, **Location**, or **Featured** toggle — changes save automatically.

3

To delete it

With the photo open, click the : menu (top right) → **Delete**. It disappears from the gallery right away.

● IF SOMETHING GOES WRONG

See a **red error message**? It's almost always the connection. Check your internet, then click Upload again — already-uploaded photos won't be duplicated for that batch. Still stuck? Note what the red message says and send it to Brian.
